

# 北一女中 106 學年度《數戰數決》有獎徵答活動

班別：二年誠班 座號：33.39 號 姓名：蔣馨慧、譚書曼

題號：4-6 頁碼/總頁數：\_\_\_\_\_ (如果只有一頁，可不填)

(請不要將兩題的解答寫在同一張答案紙，一題的解答也不要寫在同一張答案紙的正反面。)

$$\textcircled{1} \frac{1}{1+a^2} + \frac{1}{1+b^2} = \frac{a^2+b^2+2}{a^2+b^2+ab^2+1}$$

∵ a, b 皆為正數，由算幾不等式可知  $\frac{a+b}{2} \geq \sqrt{ab} \Rightarrow ab \leq 1$

故當  $a^2b^2 = (ab)^2 = 1$  時， $\frac{a^2+b^2+2}{a^2+b^2+ab^2+1}$  有最小值  $\frac{a^2+b^2+2}{a^2+b^2+1} = 1$

$$\therefore 1 \leq \frac{1}{1+a^2} + \frac{1}{1+b^2}$$

② 令  $a=1-k$ ,  $b=1+k$ , 且  $|k| \leq 1$

$$\text{則 } \frac{1}{1+a^2} + \frac{1}{1+b^2} = \frac{1}{1+(1-k)^2} + \frac{1}{1+(1+k)^2} = \frac{2k^2+4}{k^4+4}$$

$$\text{假設: } \frac{1}{1+a^2} + \frac{1}{1+b^2} = \frac{2k^2+4}{k^4+4} \geq \frac{1+\sqrt{2}}{2}$$

⇒ 化簡後可得  $(1+\sqrt{2})k^4 - 4k^2 + (4\sqrt{2}-4) \leq 0$   
 利用公式解可將上式改寫為  $(k^2 - (2\sqrt{2}-2))^2$  必定  $\geq 0$

故原假設不合

$$\Rightarrow \frac{1}{1+a^2} + \frac{1}{1+b^2} \leq \frac{1+\sqrt{2}}{2} \Rightarrow 1 \leq \frac{1}{1+a^2} + \frac{1}{1+b^2} \leq \frac{1+\sqrt{2}}{2} \text{ 得證}$$

$$\text{直當 } \frac{1}{1+a^2} + \frac{1}{1+b^2} = \frac{1+\sqrt{2}}{2} \text{ 時, } k = \pm(\sqrt{2\sqrt{2}-2})$$

$$\Rightarrow 1. k = \sqrt{2\sqrt{2}-2} \text{ 時, } a = 1 - \sqrt{2\sqrt{2}-2}, b = 1 + \sqrt{2\sqrt{2}-2}$$

$$2. k = -\sqrt{2\sqrt{2}-2} \text{ 時, } a = 1 + \sqrt{2\sqrt{2}-2}, b = 1 - \sqrt{2\sqrt{2}-2}$$

$$\Rightarrow (a, b) = (1 - \sqrt{2\sqrt{2}-2}, 1 + \sqrt{2\sqrt{2}-2})$$

$$\text{or } (1 + \sqrt{2\sqrt{2}-2}, 1 - \sqrt{2\sqrt{2}-2}) \quad \#$$
